

P3 frt-v2 multi-seed SAC — ODE selection proxy vs steps (ODE selection proxy, not certified frt-v2 pass rate)

P3 frt-v2 SAC training — ODE selection proxy convergence

△ ODE selection proxy, not certified frt-v2 pass rate.

Policy: 20-D de-privileged observation, 3-D action [iq, mse_d, mse_q].
y-axis = partial_proxy_pct over connect/reactive/recover; limit & survive are NOT_EVALUATED in the ODE, so this is a SELECTION proxy, not a switching pass rate.

Certified switching-level result (full-320):
residual SAC mi=14: strict 53.1% / no-fail 89.4% / fail 10.6%
dq fixed-law mi=7: strict 39.7% / no-fail 68.1% / fail 31.9%
